

KALP SONI

Platform Engineer | DevSecOps | Cloud Security Automation
Brampton, ON • kalp.soni2004@gmail.com • 647-897-9837 • kalpsoni.com

PROFESSIONAL SUMMARY

Platform Engineer with 2+ years of experience designing and operating secure, scalable cloud infrastructure on AWS and Azure. Specializes in Kubernetes security hardening, GitOps automation (Argo CD / FluxCD), policy-as-code enforcement (Kyverno), and CI/CD pipeline engineering. Delivered measurable reductions in deployment toil, security exposure, and incident response time across production environments supporting 12+ internal services. AWS Certified Solutions Architect and Certified Professional Ethical Hacker.

CORE COMPETENCIES

Container Orchestration: Kubernetes (AKS, EKS) · RBAC · Network Policies · Pod Security Standards · Helm · Kustomize
GitOps & IaC: Argo CD · FluxCD · Terraform · ARM Templates · Helm Chart Repositories · Drift Detection
CI/CD Engineering: GitHub Actions · Jenkins · CircleCI · Container image pipelines · Automated rollback
Policy-as-Code: Kyverno · OPA / Gatekeeper · Admission Controllers · Audit/Enforce mode · Policy reporting
Cloud Platforms: AWS (EC2, S3, VPC, Lambda, IAM, CloudTrail, Security Hub) · Azure (AAD, RBAC, AKS, Defender, Monitor)
Security & Compliance: Zero-trust architecture · CIS Benchmarks · SOC2 controls · Identity governance · Trivy · SAST
Observability: Azure Monitor · Log Analytics · AWS CloudWatch · Alerting automation · Incident runbooks
Languages & Tools: Python · PowerShell · Bash · YAML · Docker · Git · SQL · Jira

PROFESSIONAL EXPERIENCE

IT Operations Associate – Cloud & Platform | SME LLP | Mississauga, ON

Feb 2026 – Present

- Architect and operate multi-environment cloud infrastructure (AWS + Azure) supporting 12 internal services with 99.7% uptime, enforced via systematic health checks, drift detection alerts, and runbook-driven incident response.
- Built GitOps delivery platform using Argo CD and FluxCD; eliminated all manual kubectl apply operations and decreased deployment-related incidents by 65% across Dev, Staging, and Prod clusters within 6 weeks of rollout.
- Authored and enforced 15+ Kyverno admission control policies covering image signing, resource limits, and namespace isolation; CI/CD policy gates block 100% of non-compliant container images before reaching production.
- Operationalized cloud security remediation via Python and AWS Lambda targeting CIS Benchmark violations (S3 public access, stale IAM credentials, unencrypted EBS volumes); slashed open security findings by 78% within 45 days of deployment.
- Streamlined release delivery with GitHub Actions CI/CD pipelines — Docker build, Trivy SAST scan, ECR push, Kubernetes rolling deploy — compressing average release cycle from 3.5 hours to 22 minutes, a 90% reduction in delivery time.

IT Platform & Systems Administrator | Backerhaus Veit | Mississauga, ON

Sep 2024 – Feb 2026

- Provisioned hybrid Azure infrastructure (IaaS/PaaS) using Terraform and ARM templates across Dev/Test/Prod; eliminated 88% of manual provisioning steps and cut environment setup time from 3 days to 4 hours.
- Hardened Azure AD with RBAC, conditional access, and identity governance across 95 user accounts and 200+ cloud resources; achieved zero unauthorized access incidents over 17 months.
- Deployed Azure Monitor and Log Analytics alerting pipelines for server, network, and app-layer events; lowered mean time to detect (MTTD) infrastructure incidents from 48 minutes to 11 minutes (77% improvement).

PLATFORM ENGINEERING PROJECTS

GitOps Platform – Argo CD + FluxCD: Multi-cluster GitOps delivery system with self-healing reconciliation and promote-on-merge via GitHub Actions; cut deployment toil by 65% and achieved full parity across all environments within 6 weeks.

Kubernetes Security Hardening – Kyverno: 15+ admission control policies enforcing CIS Kubernetes Benchmark controls; Slack-integrated audit reporting surfaces policy violations to developers in real time, cutting remediation lag from days to minutes.

Cloud Security Automation – AWS & Azure: Event-driven Lambda + Python framework auto-remediates CIS violations in under 5 minutes; cross-cloud compliance dashboard (Security Hub + Azure Defender) drove an 78% drop in open critical findings in 45 days.

Terraform IaC Module Library: Versioned Terraform module library (VPC, EC2 ASG, S3, IAM) with S3+DynamoDB remote state; plan/apply PR gates cut infrastructure change lead time from 3 days to same-day.

CERTIFICATIONS & EDUCATION

AWS Certified Solutions Architect – Associate (SAA-C03) | Amazon Web Services | Valid May 2025 – May 2028

Certified Professional Ethical Hacker (C|PEH) | Mile2 | Jun 2021

Diploma, Computer Systems Technology | Sheridan College, Brampton | Jan 2023 – Sep 2025
